```java
public class Statement {
    public static void main(String[] args) {
        // Statement : single line of code, or , combination of
variable operator values, etc.
        // Types: Branching, Looping, Jumping
        // Branching --> Decision making statements or else
            // if, if-else, else if ladder, switch-case
        // Looping   --> Repeatation of statements
            // for, while, do-while
        // Jumping   --> break and continue.. | break label1;

        /*

        for(int i=0; i<=20; i++){
            if(i==5)
                break label1;
        }
        label1:
            System.out.println("Break statement executed");
        */

    }
}
```
